

# Context Aware Location Interface

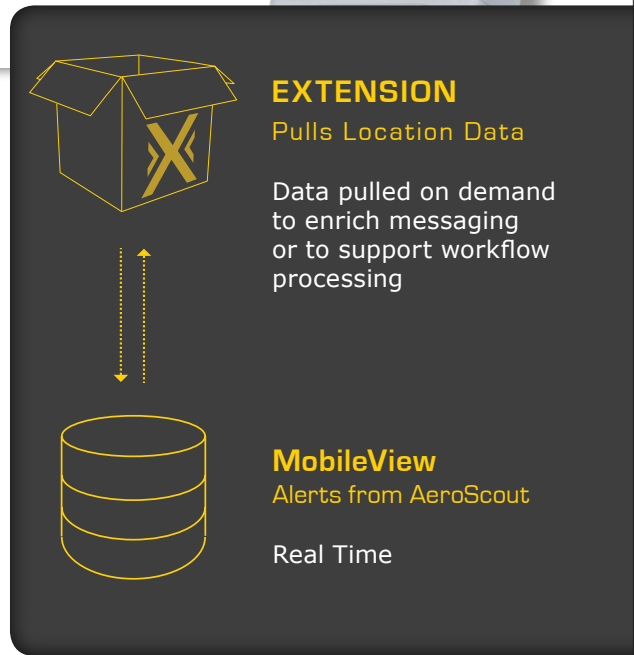

## AeroScout Interface

AeroScout provides a single, unified graphical user interface of all locations and AeroScout originated alerts.

EXTENSION, INC. and AeroScout have collaborated to develop an integration that combines EXTENSION's patent-pending VoIP context-aware alerting with AeroScout's Healthcare RTLS (Real-Time Location System) and leverages an organizations existing Wi-Fi infrastructure. The combination of advanced technologies provides a more enriched, clinically-relevant tracking and alerting solution incorporated with the Cisco Unified Communications platform so that healthcare organizations can improve clinical and operational workflows.

## EXTENSION Workflows

EXTENSION provides an interactive menu and real time, context-aware alerts to allow providers to work more efficiently.

# Integrated Features & Benefits

## AeroScout's Core Offering:

- Real-time location data
- Status and condition information about assets, patients and staff.

## EXTENSION's Core Offering:

- Is an appliance-based software application that aggregates HL7 and web-services data from all HIS/EMR systems
- Delivers relevant information to mobile devices such as Cisco IP Phones or smart phones
- Allows recipients to send automated responses via their communication device.

EXTENSION is a critical component for transforming AeroScout's core solution into a more clinically-relevant offering for enterprise healthcare environments. Our combined solution offers benefits through innovative features and advanced functionality.

## Integrated Solution Highlights:

- HL7-enabled AeroScout alerts
- Advanced AeroScout alerting via Text-to-Speech (TTS) phone calls and SMS text messaging
- Alert management capabilities such as priority alerts, acceptance and escalation
- Location-enabled EXTENSION alerts.

By implementing EXTENSION for AeroScout, healthcare organizations with a Wi-Fi Infrastructure and those with existing AeroScout technologies such as temperature monitoring, asset tracking and patient flow will experience more efficient workflows. Furthermore, EXTENSION helps physicians, nurses and other hospital staff increase efficiencies and minimize time wasted on coordination.

## Systems Requirements

- Recent version of MobileView 4.1 or later which includes the MobileView APIs
- Cisco Unified Communications Manager 6.0 or later to include wired and/or wireless IP phones
- EXTENSION Appliance
